

# SC3.316: Mathematical Methods in Biology

## Midterm 2

Duration: 1 hr 30 mins

- 1) (15 points) Find the reduced echelon form of the following matrix:

$$A = \begin{pmatrix} 1 & 2 & 1 & 9 \\ 2 & 4 & 1 & 18 \\ 3 & 5 & 1 & 24 \end{pmatrix}$$

2. (10 points) State the Deficiency Zero Theorem.

3. (15 points) Consider a reaction network with  $l$  linkage classes. Let  $\delta_i$  denote the deficiency of the  $i^{\text{th}}$  linkage class and let  $\delta$  denote the deficiency of the whole network. If  $\delta = 0$ , then show that  $\delta_i = 0$  for every linkage class.

4. (15 points) A reaction network is "forest-like" if every direct link connecting two complexes in a linkage class is a cut-link. Show that every forest-like weakly reversible reaction network is reversible.

5. (15 points) A reaction network is consistent if there exists positive real numbers  $c_{y \rightarrow y'}$  such that

$$\sum_{y \rightarrow y'} c_{y \rightarrow y'} (y' - y) = 0. \quad (1)$$

Show that a weakly reversible reaction network is consistent.

6. (15 points) Show that a reversible star-like network (as in Figure 1) is quasi-thermodynamic.

Figure 1: Star-like network.

7. (15 points) Let  $A_{n \times n}$  be a square matrix and let  $x \in \mathbb{R}^n$ . Show that the following are equivalent

1. For every vector  $b \in \mathbb{R}^n$ , the system  $Ax = b$  has at least one solution.
2. For every vector  $b \in \mathbb{R}^n$ , the system  $Ax = b$  has exactly one solution.
